

# Update from version 2.4.3 to 2.4.4

To manually update the theme from version 2.4.3 to the newest version 2.4.4 please try to:

1. Do the database backup:

<https://prnt.sc/owb2ra>

2. Login to your FTP.

3. Copy to your computer from FTP (to make a backup) catalogs (this is important!):

**-themes/AngarTheme**

**-modules/all "angar" modules**

4. Download and unpack .zip:

[https://angarthemes.eu/theme\\_update/zip/update\\_2.4.3\\_to\\_2.4.4.zip](https://angarthemes.eu/theme_update/zip/update_2.4.3_to_2.4.4.zip)

5. Add catalogs **"themes"** and **"modules"** (from the zip file) to your main shop catalog (some files will be overridden).

6. Clear PrestaShop and browser cache:

<https://prnt.sc/T60-SFCnR7uQ>

7. This is optional.

Edit:

**/config/themes/AngarTheme/shop1.json** - and change here **"version":2.4.3** to **"version":2.4.4**

**/themes/AngarTheme/config/theme.yml** - and change here theme version in the line 3

If you added any modifications to .tpl or .css file probably you must add them again after update.

-----

Changelog:

-Fix for the order confirmation button in PrestaShop 1.7.8.0

-Small css fixes

-The brand name is now displayed in the quickview

-The theme now automatically detect your PrestaShop version and apply a correct code for this version (you don't need anymore select PrestaShop version in the live editor)

-Other less important fixes
